SUMMARY

Data professional working across data science, BI, and AI automation. I build automated data pipelines, invoice parsing systems, and LLM-powered document processing tools for a multi-entity private equity portfolio, using Python, SQL, DAX, Power BI, and Tableau day to day. BS in Business Analytics from Carnegie Mellon University.

SKILLS

Programming Languages:

Databases & Technologies:

AI & Automation:

Languages:

Python(Pandas, Numpy, Streamlit, Plotly), DAX, SQL, R(ggplot2), Node.js

Power BI, Tableau, MS Excel, AWS, MongoDB, MySQL, Figma

LLM-Powered Document Processing, Agentic Workflows, MCP (Model Context Protocol), OCR, Procurement Automation

English, Spanish, Portuguese(Beginner)

PROFESSIONAL EXPERIENCE

SNH Strategic Partners

Hato Rey, PR

Procurement Analyst

December 2025 - Present

- Audited invoice pricing against contract terms across a multi-entity private equity portfolio, identifying over \$700K in cost savings through systematic price discrepancy detection.
- Built an MCP (Model Context Protocol) server integrated with the CLM, enabling stakeholders across the portfolio to query contract data conversationally through Claude.
- Automated reconciliation processes across portfolio companies, reducing manual processing time and improving the accuracy of financial matching.
- Developed multi-stage document parsing pipelines, combining deterministic parsing, OCR, and generative AI extraction, to pull structured data from unstructured PDF invoices across the portfolio.
- Designed and deployed AI-powered automation tools and data pipelines using Python, streamlining procurement operations across a portfolio of operating companies.

AIG

Hato Rey, PR

Data Analyst

September 2024 - November 2025

- Developed and maintained Power BI dashboards for claims operations, including two weekly dashboards for adjusters and managers tracking closing ratio, outstanding claims, and other KPIs. Improved team efficiency by 20% and made reporting more data-driven.
- Led the creation of an Auto Claims dashboard, using Python for data transformation and DAX for key metrics so leadership could monitor vendor payouts, savings, and high-frequency car brands. Cut manual reporting time by 30% and improved cost analysis.
- Spearheaded a fraud detection initiative, designing a new Power BI dashboard to flag suspicious claims patterns, which reduced potential fraudulent payouts and strengthened compliance with claims guidelines.
- Resolved recurring data issues by troubleshooting dashboard bugs, optimizing workflows, and fixing a long-standing Tableau data discrepancy. This cut manual query time by 50% and made reporting more reliable for the claims team.

EDUCATION, RESEARCH

Carnegie Mellon University, Pittsburgh, PA

May 2024

B.S. in Business Administration, Concentration: Business Analytics, Minor: Logic & Computation

Relevant Courses: Data Mining for Business Analytics, Advanced Data Management, Business Computing, Principles of Computing, End to End Business Analytics, Intermediate Macroeconomics

Undergraduate Economics Research

May 2021 - July 2021

- Analyzed COVID-19 monetary policy's impact on US inflation using linear regression models in R Studio.
- Discovered significant effects of money supply on inflation, while the interest rate alone was not impactful.
- Collected and compiled Federal Reserve data (Nov. 2019–May 2021) and utilized FRED tools for analysis.
- Documented research processes and presented findings on the interaction between monetary policy variables and inflation.

Certifications: IBM Data Science Professional, Microsoft Office Specialist Excel(2018)
